written material

going to grab this data from gh: https://raw.githubusercontent.com/stefanbund/py3100/main/ProductList_118.csv

The Ulta Beauty Problem

our work entails designing and delivering a business intelligence application that serves a major retail enterprise. The system ....

first, install the plotly visualization library.

```
!pip install plotly-geo
```

```
Collecting plotly-geo
  Downloading plotly_geo-1.0.0-py3-none-any.whl (23.7 MB)
     ━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━ 23.7/23.7 MB 45.8 MB/s eta 0:00:00

our system depends on the use of the pandas and numpy libraries.

```
import pandas as pd
import numpy as np
```

imports two python libraries and is needed to access the functions provided (data analysis, cleaning, manipulation, etc)

```
url ='https://raw.githubusercontent.com/stefanbund/py3100/main/ProductList_118.csv'
url_m = 'https://raw.githubusercontent.com/stefanbund/py3100/main/matrix.csv'
```

contains raw files from the GitHub repository and can be used in python and pandas to read and manipulate the data

```
df_m = pd.read_csv(url_m) #make a pandas dataframe
```

Panda function reads the csv files and convert it into a dataframe defined by the url variable. Dataframe can be used to analyze data.

is a panda dataframe for the respective variable to lay out data to analyze

```
df_m.shape[0]
```

```
25
```

transform al_fips, the list of county fps codes, into a pandas dataframe

```
print(len(al_fips))
df_counties = pd.DataFrame(al_fips)
df_counties.size
```

```
25
50
```

displays the number of countries as well as the entries in that dataframe

19	Homewood	2373	7188	9880	9236	5969	9998	8703	8440	4643	...	8787	5459	83

```
print(df_counties.columns)
```

```
Index(['County', 'FIPS Code'], dtype='object')
```

df_m: all display data, per store

```
df_m.shape[0]
```

```
25
```

fips codes per county

```
df_counties.shape[0]
```

```
25
```

retrieves the # of rows in the countries dataframe where each row represents an Alabama county and its respective FIPS code

```
df_counties.columns
```

```
Index(['County', 'FIPS Code'], dtype='object')
```

merge the county fips codes with the stores sales results (df_m)

```
merged_df = pd.concat([df_m, df_counties], axis=1)
merged_df.head()
```

	City	1	2	3	4	5	6	7	8	9	...	38	39	4
0	Birmingham	8285	5343	6738	6635	5658	8118	4311	8535	3436	...	1756	7598	150
2	Mobile	8035	5569	9492	5905	5024	1107	6937	5580	8044		9296	2815	48

use the merged_df as data source for the choropleth

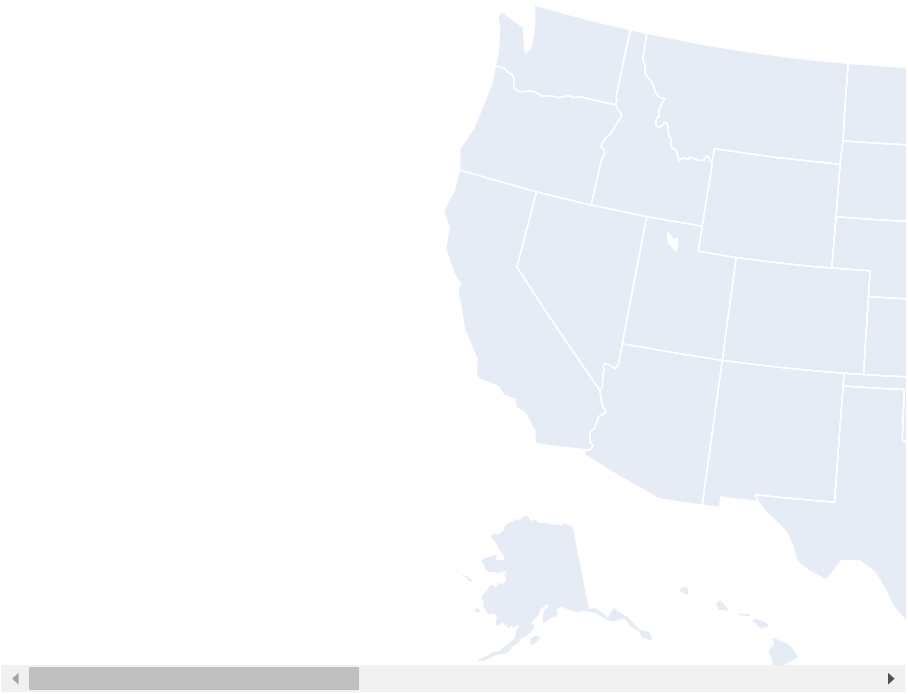
```
merged_df.columns
```

```
Index(['City', '1', '2', '3', '4', '5', '6', '7', '8', '9', '10', '11', '12',
       '13', '14', '15', '16', '17', '18', '19', '20', '21', '22', '23', '24',
       '25', '26', '27', '28', '29', '30', '31', '32', '33', '34', '35', '36',
       '37', '38', '39', '40', '41', '25qt', '50qt', '75qt', 'zip', 'County',
       'FIPS Code'],
      dtype='object')
```

use the plotly api, feed it the merged_df information to do a map, with encoded quantile values

```
import plotly.express as px

fig = px.choropleth(merged_df, geojson=counties, locations='FIPS Code', color='25qt',
                           color_continuous_scale="Viridis",
                           range_color=(0, 38),
                           scope="usa",
                    hover_name="City",
                    hover_data=["City"],
                           labels={'25qt':'percentage displays under 25th qt'}  #
                          )
fig.update_layout(margin={"r":0,"t":0,"l":0,"b":0})
fig.show()
```



This code creates a choropleth map that visualizes data from merged_df on a county-level map of the United States which represents the values or percentages of quartiles associated with each county.

```
import plotly.express as px
import requests
import json
import pandas as pd

# Load the geojson data for Alabama's counties
r = requests.get('https://raw.githubusercontent.com/plotly/datasets/master/geojson-counties-fips.json')
counties = json.loads(r.text)

# Filter the geojson data to only include Alabama's counties
target_states = ['01']
```

```
    counties['features'] = [f for f in counties['features'] if f['properties']['STATE'] in target_states]

    # Load the sample data for Alabama's counties
    df = pd.read_csv('https://raw.githubusercontent.com/plotly/datasets/master/fips-unemp-16.csv', dtype={'fips': str})

    # Create the choropleth map
    fig = px.choropleth(df, geojson=counties, locations='fips', color='unemp',
                        color_continuous_scale='Viridis', range_color=(0, 12),
                        scope='usa', labels={'unemp': 'unemployment rate'})
    fig.update_layout(margin={'r': 0, 't': 0, 'l': 0, 'b': 0})
    fig.show()
```
